

## DEN-JET' HIGH PRESSURE WATER BLASTER

Dear Sir,

Are you having problems with PORT CAPTAINS, CHARTERS or INVESTMENT COMPANIES ?? Could it be that your vessels are not maintained to the standard they should be ?? and do you have the same problem as any other person involved in operating vessels – CORROSION.

Prevention of corrosion begins from the steel construction of your vessel and finishes with the final coating. All coatings have to be regarded as passive protection and are often mechanically damaged by cargo operation. Low paint thickness or improper surface preparation can also result in corrosion. RUST CREATES RUST. Fighting rust must start as early as possible – this is the only way to safeguard your vessel and keep her in good shape.

The repair of mechanical damages and corrosion in general with high pressure equipment is the quickest and best solution you can get. The efficiency relies entirely at the energy of the water striking the surface. Water blasting is safe and environmentally friendly. The water blasted surfaces are always of a better quality than any hand or power tooled surface – free of salt, contaminations and osmoses --- Your coating simply last longer.....

Den-Jet Marine has as a manufacture taken this challenge by developing a range of water blasters for **On Board Maintenance** to assist in fighting corrosion. The method used has taken into consideration that much larger surface areas has to be maintained thus minimizing the time factor. It has to be simple to operate and simple to maintain. All our equipment is made for marine use – we are not an industrial player who ventured into the marine by accident – we started out as a marine supplier.

We have made special units for the container vessels due to space concerns, special units to the product carriers taken the safety aspect into account and developed special accessories for bulkers (haul cleaning). All units are supplied with general documentation as well as manuals specially for the Bosun. Den-Jet supplies complete packages for “plug and play” - no excuse from the crew not to use it. We focus on the marine and do nothing else – that makes us special..

We have a range of water blasters from 350 bar for cleaning applications to 1400 bar unit for blasting to suit your needs. We trust we can assist you to keep the value of your vessels intact.

We look forward to help you solve your corrosion problems.

Best Regards

Lars K. Nielsen
